

Smart Samarpan Academy — Interview Preparation Master Guide

Total Coverage: 16 Parts | 4 Files | 145+ Questions | 15 Execution Flows | All 31 APIs Documented

Your Study Materials

#	File	Parts Covered	What's Inside
1	interview_prep_part_1_to_5.md	Part 1-5	Project intro, 30s/1min explanations, impact analysis, all 17 features ranked, 20 technologies explained, complete architecture diagram
2	interview_prep_part_6_to_9.md	Part 6-9	15 feature execution flows, HIGH/MEDIUM priority code with line-by-line explanations, MongoDB database analysis (6 collections), complete API reference
3	interview_prep_part_10_to_16.md	Part 10-16	6 technical challenges with solutions, 10 future improvements, learnings, deployment details, “Why” questions, mock interview guide
4	interview_questions_14 (Expanded)	Part 14	145+ interview questions across 10 categories with detailed answers, follow-ups

Recommended Study Plan

Day 1: Understand the Basics (Parts 1-3)

- ☐ Read Part 1 — Memorize 30-second and 1-minute explanations
- ☐ Read Part 2 — Know your project's honest impact
- ☐ Read Part 3 — Know all 17 features and their priorities

Day 2: Know Your Tech (Parts 4-5)

- ☐ Read Part 4 — Understand every technology and why you chose it
- ☐ Read Part 5 — Be able to draw the architecture diagram from memory

Day 3: Master the Flows (Part 6)

- ☐ Study all 15 execution flows
- ☐ Practice explaining: Registration, Login, Payment, Quiz Generation

Day 4: Understand the Code (Part 7)

- ☐ Study HIGH priority code — isAuth, register, paymentVerification, quiz generation
- ☐ Be able to explain each line and why it exists

Day 5: Database + APIs (Parts 8-9)

- ☐ Know all 6 collections, their fields, and relationships
- ☐ Know all 31 API endpoints — method, path, purpose

Day 6: Challenges + Improvements (Parts 10-12)

- ☐ Practice the “most challenging part” answer naturally
- ☐ Know 5 realistic improvements you’d make

Day 7: Questions Practice (Parts 14-16)

- ☐ Go through all 145+ questions in the questions bank
- ☐ Practice answering out loud, not reading
- ☐ Focus on Tricky Questions (Section J)

Key Numbers to Remember

Metric	Value
Total API Endpoints	31
Database Collections	6
Frontend Pages	14+
Admin Pages	6
Mongoose Models	6
AI Integrations	3 (Quiz, Formula, Performance Analysis)
Auth Methods	3 (Email/Password, OTP, Google OAuth)
External Services	4 (Gemini, Razorpay, Google OAuth, Gmail SMTP)
Tech Stack Items	20+

Quick Interview Answers

“Tell me about your project” → See Part 1, 30-second explanation

“What was the hardest part?” → AI response parsing + rate limiting (Part 10)

“What would you improve?” → Cloud storage, input validation, proper CORS, pagination (Part 11)

“Why this tech stack?” → See Part 4 for each technology’s justification

“How does authentication work?” → JWT-based with OTP verification, Google OAuth (Part 6, Flow 1-3)

“How does payment work?” → Razorpay with HMAC-SHA256 signature verification (Part 6, Flow 6)

Important: Be Honest About Limitations

Your project has real limitations (identified from code). Interviewers respect honesty:

1. CORS is too permissive (allows all origins)
2. OTP uses Math.random() (not cryptographically secure)
3. Files stored locally (not cloud)
4. Stats query is inefficient (loads all docs to count)
5. No input validation library
6. No automated tests
7. Video files accessible without auth (static serving)
8. No global error handling middleware

Know these. If asked, say: “I’m aware of this limitation. Here’s how I’d fix it...”

Goal

UNDERSTAND → EXPLAIN → DEFEND → ANSWER FOLLOW-UP QUESTIONS

Good luck with your interview, Suman!
